### Matrox Mx.tools version 3.6 **NEW**

Matrox Mx.tools 3.6 requires Adobe Premiere Pro CS3 version 3.2.0, and provides the following new features:

- Support for Microsoft Windows Vista Business or Ultimate (32-bit).
- Support for realtime playback of Sony XDCAM EX *.mp4* clips on RT.X2 and RT.X2 LE. Both HQ-mode (1080i/p and 720p) and 1080i/p SP-mode (1440x1080) clips are supported.
- Support for capturing to a Matrox *.m2v* file that you can use for DVD authoring with Adobe Encore (for SD projects only).
- For clips imported to your Adobe Premiere Pro projects, you can now choose to create both audio conform files and waveform (*.pek*) files, or create the *.pek* files only. You can also choose to disable the Matrox RT.X2 splash screen and associated audio when you first open a project after starting Premiere Pro.
- New realtime Matrox 4-point, 8-point, and 16-point garbage matte effects. These effects are similar to the Adobe Premiere Pro garbage matte effects, but include additional options to apply edge softness and adjust the opacity of your garbage matte.

For details on using the new features, see the [Matrox RT.X2 User Guide](#)

[Download Matrox Mx.tools 3.6 Updater now](#) (June 27, 2008, 46.4 MB)

This is a smaller download for users that are currently running Mx.tools 3.5. It provides the same benefits as the full DVD installation.

[Download Matrox Mx.tools 3.6 DVD content now](#) (June 27, 2008, 3.25 MB)

This is the full Mx.tools 3.6 installation, and does not require a previous Mx.tools version to be installed on your computer. **Note:** You'll need this full installation to install Mx.tools 3.6 on a Windows Vista system.
