Matrox Mx.tools version 4.0 **NEW**

Matrox Mx.tools 4.0 provides the following new features:

- Support for Adobe Premiere Pro CS4, version 4.0.1 (earlier versions of Adobe Premiere Pro are not supported).
- Support for the 64-bit version of Microsoft Windows Vista Business or Ultimate.
- New DVI monitor calibration utility that turns your DVI monitor into a true-color video display for use with SD and HD video. Controls for hue, chroma, contrast, brightness, and blue-only let you adjust and control your DVI monitor exactly as you would a broadcast HD/SD video monitor. (Not applicable to RT.X2 LE or RT.X2 SD.)
- When working in Adobe Encore CS4, you can preview video played back from the timeline on your video monitor by setting the player for your project to **Matrox Player** (available on the **Advanced** page of the **Project Settings** dialog box).

For details on using the new features, see the [Matrox RT.X2 User Guide](#)¹

[Download update to Matrox Mx.tools 4.0 now](#)² (December 19, 2008, 133 MB)

This is a smaller download for users that are currently running Mx.tools 3.6, and want to stay with their 32-bit operating system.

[Download Matrox Mx.tools 4.0 DVD content now](#)³ (December 19, 2008, 2.8 GB)

This is the full Mx.tools 4.0 installation, and does not require a previous Mx.tools version to be installed on your computer.

Note: You'll need this full installation to install Mx.tools 4.0 on a Windows Vista 64-bit system.
